2018 IBC A Look Ahead

COURSE DESCRIPTION

The Northern Nevada jurisdictions will likely be adopting the 2018 I-codes within one year. The purpose of this seminar is to highlight many of the significant changes that will occur in the 2018 IBC from the 2015 version. Because Northern Nevada is currently enforcing the 2012 IBC, time will also be allotted to highlight some of the significant changes that were made from the 2012 IBC to the 2015 version. Some of these changes include new methods of calculating allowable heights and areas, new deck and balcony provisions, changes to the referenced structural standards, and much more.

Instructor: Chris Kimball, PE, MCP, CBO

Chris has more than 18 years of experience in the design, construction, and building safety industries. He is a licensed structural engineer as well as an ICC Master Code Professional. He maintains ICC certifications as a certified building official, certified fire code official, combination plans examiner, combination inspector, etc. He has performed plan reviews for thousands of projects throughout Nevada, Washington, Utah, Wyoming, California and Arizona.

WEDNESDAY
